

Requirements :

After discussing with the stakeholder how he wanted the system to work, we established these requirements:

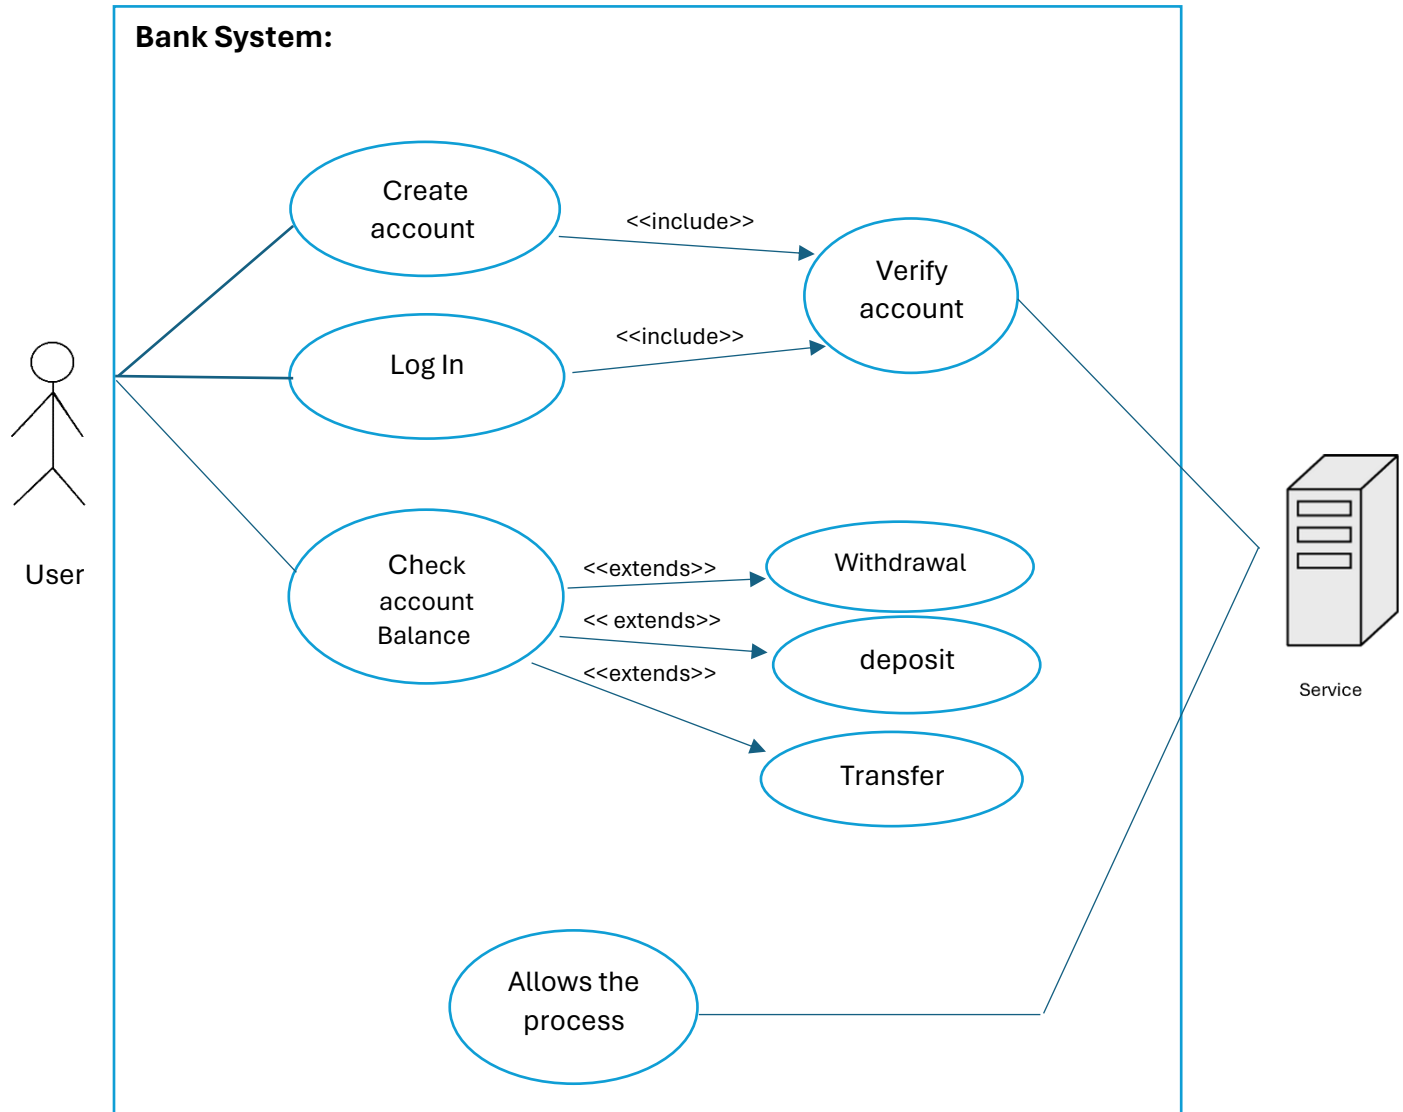

Functional requirement:

- The user shall be able to create more than one account
- The user shall be able to login to the system
- The user shall be able to connect their accounts together
- The user shall be able to withdrawal from his accounts
- The user shall be able to deposit into the account
- The user shall be able to Check the account balance.
- The user shall be able to Transfer safety

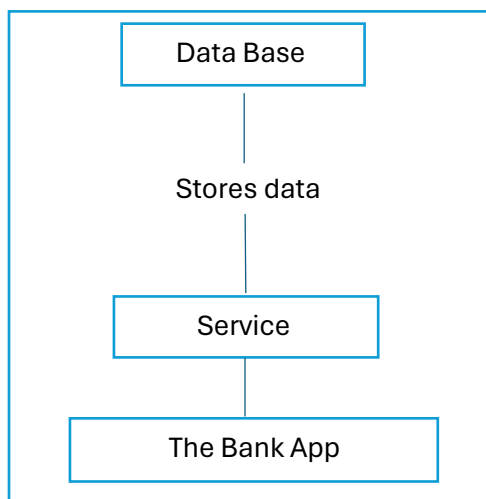

Non- Functional requirement:

- The system shall verifies user account to insure security. The user should have 3 tries to login.
- The system shall be available 24 hours, the downtime of the system should not exceed 10 seconds
- The system should have a good and clear interface design .

// Alt's third option

Interfaces we worked on:

A mobile app login screen with a white background and a purple border. At the top, there is an illustration of a credit card, a dollar sign, and a stack of coins. Below the illustration, the text reads "Log in". There are two input fields: "credit number" and "password". Below the input fields, there is a link "don't have an account? Sign up" and a purple button "log in".

A mobile app sign up screen with a white background and a purple border. At the top, there is an illustration of a credit card, a dollar sign, a question mark, and a stack of coins. Below the illustration, the text reads "Sign up". There are five input fields: "Full name", "ID", "Date of birth", "Personal / Business account", and "password". Below the input fields, there is a link "have an account? Log in" and a purple button "sign up".
